# SIZES

# PROPER TEMPERATURE RANGES

# ALARMS

If you want your wine to stay fresh when you go to drink it, you have to store it at just the right – and constant – temperature. This is generally between +5°C and +18°C, depending on the kind. Therefore, your wine cooler/ cabinet must be able to do that in a reliable manner. Vino Bellezza wine coolers are capable of offering just that – and using advanced alarm technology to boot. They alert you when you leave your cooler door ajar, and when the temperature inside is out of whack from what it ideally should be. All Vino Bellezza wine coolers keep all your wines as fresh as the day you first opened them – leaving the pleasure of sipping them to you.

# UV PROTECTION GLASS

Exposure to sunlight or other bright forms of light speeds up the aging process of wine, which can spoil its taste. All Vino Bellezza wine coolers feature special UV protection glass doors. UV protection is enabled through tinted double-pane glasses with LOW-E coating. The double-pane glass is filled with argon gas which reflects almost all of the harmful UV rays back, protecting the wines from the adverse effects of light.

## LED LIGHTING

Vino Bellezza wine coolers are equipped with LED lighting. The LED light spectrum does not give off UV rays. This makes it possible to illuminate the interior of the cooler uniformly for a long period of time without any harm to the wines. The LED lighting can be left on all the time, dimmed or turned off with a single switch.

## NATURAL WOOD SHELVES

Wine is generally stored horizontally to keep the cork moist and prevent spoilage. Wine should be stored on hardwood shelves when stored for long periods, as metal shelves can lead to adverse effects such as condensation. All Vino Bellezza wine coolers come with five sturdy Russian pine wood shelves. These natural wood shelves are designed to perfectly accommodate Bordeaux bottles. The shelves are adjustable in height, allowing maximum capacity usage when bottles are fitted opposite each other. Additional wood shelves can be purchased as an accessory.

## IDEAL TEMPERATURE IN ALL CONDITIONS

To preserve the quality of wine, storing it at the right temperature is a must. In general, the ideal storage temperature for all wines is between +5 °C and +14 °C. Another key requisite for storing wine is to keep the temperature as stable as possible. In particular, the serving temperature plays a key role in the taste and pleasure you get out of wine. Vino Bellezza wine coolers are equipped with a display panel that allows you to control the temperature. The temperature inside the cooler is adjusted electronically. The stainless steel accents are designed to ensure ideal storage temperature. LED lights generate very little and a negligible amount of heat, therefore allowing the lights to be left on for long durations without heating the bottles.

## REDUCED VIBRATION

Vibration can also affect how fresh your wine stays over time. Failure to prevent it can cause sediment to form within your bottles, ultimately making your wine to taste and even look strange. Vibration also causes the wine's tannins to collide, in turn undesirably accelerating the otherwise natural aging process. The more you protect your wine from vibration, the longer it'll last and taste better it'll taste.

All Vino Bellezza wine coolers feature special vibration-absorbing rubber wedges attached to the cooling cycle compressor. Moreover, they also feature static condensers that cool the gas inside, therefore preventing the need for a conventional fan motor - another cause of vibration. This kills two birds with one stone: say goodbye to unwanted shaking, and hello to saving energy.

Vino Bellezza means 'beautiful wine' in Italian. What makes wine beautiful?

While all wine lovers surely have a different answer to this question, everyone will agree that once wine is produced, it needs to be stored under specific conditions to preserve its beauty and quality.

Wine is considered to be a living drink as it continues to mature in the barrel and, subsequently, in the bottle. That is why wine needs to be stored in an undisturbed place with a constant temperature and ideal humidity without any direct exposure to sunlight or bright lights.

Not all wine lovers have access to such an environment - one that only a cellar can provide naturally. That's where Vino Bellezza wine coolers come to the rescue.

Vino Bellezza's story began in 2016 when Öztaş Iron & Steel Co. entered the commercial cooler market, building on its ever-growing refrigeration know-how dating back to 1980. Vino Bellezza wine coolers are the end product of its ongoing R&D efforts since then.

Offering a range of benefits, Vino Bellezza wine coolers are available in four different lines. Vino Bellezza wine coolers are set to become the new choice of wine lovers thanks to their high performance, easy-to-use features, ergonomic and sleek design and, most importantly, accessible prices. Whether for your kitchen, living room, office or boat, we've got a Vino Bellezza to suit all needs.

## RESERVE LINE

If wine collecting has become your lifestyle and you're ready to take your collection to the next level, then look no further than Vino Bellezza Reserve line. The Reserve line consists of six different models for wine lovers who read every wine article they find, care about the quality of wine and consume around 10-15 bottles a month. Equipped with signature Vino Bellezza features including UV protection glass doors, a digital thermostat, control panel, and natural pine wood shelves. The interiors of Reserve wine coolers are made from doublecoated galvanized metal resistant to corrosion, offering durability and hygiene in one.

## RESERVE 14

Reserve 14, the smallest model in the Reserve line, is an under-counter wine cooler. Featuring an 14-bottle capacity, Reserve 14 is well-suited for wine lovers who are looking to invest in a mid-range wine cooler.

They particularly appeal to true wine connoisseurs, and feature all the bells and whistles to prove it. They moreover come in one of three ultra-chic models and take up very little space. All of them include: top grade UV glass panels, a digital thermostat, a control panel, and natural red pine shelves. Better still, they come with a stainless steel interior, making them super ease to clean, and super durable. In short: you'll love a Master just as much as you love your wine.

## MASTER 20
